

*****Steps to install cloudwatch-agent inside AWS EC2*****

How to create iam role for below link

Prerequisite for working with cloudwatch

How to create iam role for below link

<https://docs.aws.amazon.com/AmazonCloudWatch/latest/monitoring/prerequisites.html>

Now attach new role to the ec2 instance that you want to monitor

Now go to EC2 select instance then action choose security option and then attach roles

Steps 1:- to search cloudwatch-agent pkg

```
#yum search cloudwatch
```

```
#yum info amazon-cloudwatch-agent.x86_64
```

Steps 2: to install cloudwatch-agent pkgs

```
#yum install -y amazon-cloudwatch-agent.x86_64
```

Steps 3:- configure cloudwatch-agent {use amazon document}

using wizards.....{predefined templates and settings}

Steps 4:- start the cloudwatch wizard to configure

```
#!/opt/aws/amazon-cloudwatch-agent/bin/amazon-cloudwatch-agent-config-wizard
```

after the above command copy the config path

```
/opt/aws/amazon-cloudwatch-agent/bin/config.json
```

Step 5:- start the cloudwatch-agent

```
#!/opt/aws/amazon-cloudwatch-agent/bin/amazon-cloudwatch-agent-ctl -a fetch-config -m ec2 -s -c file:/opt/aws/amazon-cloudwatch-agent/bin/config.json
```

Step 6:- to check status of cloudwatch-agent service

```
#systemctl status amazon-cloudwatch-agent.service
```

Step 7:- to install log on cloudwatch-agent

```
#yum search rsyslog
```

```
#yum info rsyslog.x86_64
```

```
#yum install -y rsyslog.x86_64
```

```
#cd /var/log
```

```
#tail -f messages
```
