

Aws cli script auto_user_add

- 1- create a user
- 2- create login profile
- 3- policy to change user password
- 4- add user to a group
- 5- set policy on group i.e ec2full access
- 6- set permission boundary for user i.e only ec2readonly

```
#!/bin/bash
aws iam create-group --group-name devops
aws iam attach-group-policy --group-name devops --policy-arn arn:aws:iam::aws:policy/AmazonEC2FullAccess
for i in `cat userentry`
do
    aws iam create-user --user-name $i
    aws iam create-login-profile --user-name $i --password "redhat@123" --password-reset-required
    aws iam attach-user-policy --user-name $i --policy-arn arn:aws:iam::045770198817:policy/user_console_password_change
    aws iam add-user-to-group --user-name $i --group-name devops
    aws iam put-user-permissions-boundary --user-name $i --permissions-boundary arn:aws:iam::aws:policy/AmazonEC2ReadOnlyAccess
done
exit

~ $
```

./auto_user_add execute the script

```
~ $ ./auto_user_add

```

For Tilak user things are set

Permissions policies (2)

 Remove

Permissions are defined by policies attached to the user directly or through groups.

Filter by Type			
Search		All types ▼	
☐	Policy name ↗	▲ Type	▼ Attached via ↗
☐	  AmazonEC2FullAccess	AWS managed	Group devops
☐	 user_console_password_change	Customer managed	Directly

▼ Permissions boundary (set)

Set a permissions boundary to control the maximum permissions for this user. Use this advanced feature used to delegate permissions to other users. [Learn more about permission boundaries](#)

Permissions boundary
 [AmazonEC2ReadOnlyAccess](#)  AWS managed

Getting this error while login

✖ You may not be authorized to perform this action, or the new password does not comply with the account password policy set by your administrator.

Password reset ⓘ

Your account **(045770198817)** password has expired or requires a reset.

To continue, please verify your old and set a new password for **tilak** (not you?).

Old Password

☐ Show Password

New Password

Solution

Here permission boundary is restricting not to change password.

So we will create a customer manage policy which will have both ec2readonly & user console password

boundary_allow_ec2read_IAMchangepassword

Permissions defined in this policy

Info

Permissions defined in this policy document specify which actions are allowed or denied. To define permissions f

Q Search

Allow (2 of 461 services)

Service	▲	Access level	▼	Resource
EC2		Full: Read		All resources
IAM		Limited: Write		All resources

So in the script put permission boundary arn

```
~ $ cat auto_user_add
#!/bin/bash
echo "****This scripts will help to create user from userentry file****"
aws iam create-group --group-name devops
aws iam attach-group-policy --group-name devops --policy-arn arn:aws:iam::aws:policy/AmazonEC2FullAccess
for i in `cat userentry`
do
    aws iam create-user --user-name $i
    aws iam create-login-profile --user-name $i --password "redhat@123" --password-reset-required
    aws iam attach-user-policy --user-name $i --policy-arn arn:aws:iam::045770198817:policy/user_console_password_change
    aws iam add-user-to-group --user-name $i --group-name devops
    aws iam put-user-permissions-boundary --user-name $i --permissions-boundary arn:aws:iam::045770198817:policy/boundary
done
echo "****Users are added successfully****"
exit
~ $
```

Now lets check the user login

✔ Password reset successful

Password reset

Your IAM User (**surya**) password has been reset successfully.
