License : GPLv2+

Description : The sysstat package contains the sar, sadf, mpstat, iostat,

: tapestat, pidstat, cifsioestat and sa tools for Linux.

: The sar command collects and reports system activity

: information. The information collected by sar can be saved in a

: file in a binary format for future inspection. The statistics

: reported by sar concern I/O transfer rates, paging activity,

: process-related activities, interrupts, network activity, memory

: and swap space utilization, CPU utilization, kernel activities

: and TTY statistics, among others. Both UP and SMP machines are

: fully supported. The sadf command may be used to display data

: collected by sar in various formats (CSV, PCP, XML, etc.).

: The iostat command reports CPU utilization and I/O statistics

: for disks. The tapestat command reports statistics for tapes

: connected to the system. The mpstat command reports global and

: per-processor statistics. The pidstat command reports statistics

: for Linux tasks (processes). The cifsioestat command reports I/O

: statistics for CIFS file systems.
